

BUSINESS REQUIREMENTS DOCUMENT

RECRUIT-IQ

AI-Augmented Recruitment and Interview Platform

Item	Details
Document owner	Suvetha S P
Version	1.0 (Draft for review)
Date	April 2026
Project	RECRUIT-IQ, an AI-augmented Applicant Tracking System
Live system	https://recruit-iq-ten.vercel.app
Source code	https://github.com/Suvetha29/RECRUIT-IQ

1. Executive Summary

Hiring teams spend a large share of their time on repetitive work: writing job postings, reading resumes, chasing candidates for updates, scheduling interviews and producing offer paperwork. RECRUIT-IQ is a web-based recruitment platform that brings these steps into one system and uses AI to remove the most repetitive parts.

HR professionals can generate job postings with AI, receive applicants ranked by a transparent ATS score, run job-specific assessments, evaluate recorded interviews and issue offer letters. Candidates apply online, take assessments, and are kept informed through in-app notifications and email.

This document defines what the business needs from the system so that the design and build stay aligned to those needs.

2. Business Background and Problem Statement

Recruitment is usually handled through a mix of email, spreadsheets and separate tools. This creates the following problems:

- Writing a complete job description for each vacancy takes time and quality varies between recruiters.
- Resumes arrive in large numbers and are screened by hand, which is slow and inconsistent between reviewers.
- Candidates are often not told where they stand, which harms the employer's reputation.
- Skills checks and interview feedback are unstructured, so decisions are hard to compare or explain.
- Offer letters and status emails are written manually and can contain mistakes.

Opportunity

A single platform with a defined hiring pipeline, explainable scoring and AI assistance can shorten the time from vacancy to hire while keeping a human recruiter in control of every decision.

3. Business Objectives

ID	Business objective	How it will be measured
BO-1	Reduce the manual effort of creating job postings	Time to publish a posting (to be baselined)
BO-2	Screen applicants faster and more consistently	Time from application to shortlist (to be baselined); every application receives a score
BO-3	Give HR one controlled pipeline from application to hire or reject	Every application holds exactly one defined status at any time
BO-4	Test candidate skills objectively	Share of jobs with an assessment attached (to be baselined)
BO-5	Make interview decisions evidence-based	Interviews with a stored transcript and structured evaluation
BO-6	Keep candidates informed automatically	100% of status changes create a notification

ID	Business objective	How it will be measured
BO-7	Protect candidate and company data	Access limited by role; no HR function available to candidates

4. Scope

4.1 In scope

- User registration, login and role-based access (HR and Candidate)
- Job posting creation and management, including AI-generated content
- Candidate applications with PDF resume upload
- Automated ATS scoring and ranked applicant lists
- Application status pipeline with HR views (list and Kanban board)
- Job-specific multiple-choice assessments with automatic scoring
- Video interview link generation for shortlisted candidates
- Interview audio upload, transcription and AI evaluation
- Offer letter PDF generation and delivery by email
- In-app notifications and email updates

4.2 Out of scope for this release

- Posting jobs to external job boards
- Payroll, onboarding and other post-hire processes
- Native mobile applications
- Semantic or embedding-based resume matching (scoring is keyword and rule based)
- Multi-company (multi-tenant) hosting
- Automatic hire or reject decisions without human review

5. Stakeholders

Stakeholder	Role in the system	Main interest
HR recruiter / HR manager	Primary user (HR role)	Fill vacancies quickly with quality candidates; less manual work
Candidate / job applicant	Primary user (Candidate role)	Easy application, fair assessment, clear status updates
Hiring manager	Indirect beneficiary	Receive a shortlist of well-matched candidates with supporting evidence
Project owner and developer	Business analyst and builder	Deliver a system that meets the documented requirements

6. Business Requirements

ID	Business requirement	Objective
BR-01	The business needs a faster way to produce complete, consistent job postings.	BO-1
BR-02	The business needs applicants ranked against each job using a scoring method that HR can understand.	BO-2
BR-03	The business needs a single defined pipeline that shows where every application stands.	BO-3
BR-04	The business needs to test candidate knowledge with job-specific assessments scored automatically.	BO-4
BR-05	The business needs a structured, recorded evaluation of each interview.	BO-5
BR-06	The business needs candidates to be informed of progress without manual effort.	BO-6
BR-07	The business needs the system to restrict features and data by user role.	BO-7
BR-08	The business needs offer letters produced in a consistent format and delivered directly to the candidate.	BO-3, BO-6

7. Hiring Process Overview

The target process below shows how a vacancy moves through RECRUIT-IQ.

Step	Actor	Activity	System support
1	HR	Creates a job posting	AI drafts the description, requirements and responsibilities; HR reviews and publishes
2	Candidate	Finds an open job and applies with a PDF resume	Resume is stored and an ATS score is calculated
3	HR	Reviews applicants for the job	List is ordered by ATS score, highest first
4	HR	Moves the application forward (or rejects it)	Status updates; candidate gets a notification and an email
5	Candidate	Takes the job assessment, if one exists	Answers are scored automatically against the pass mark
6	HR	Invites shortlisted candidates to an interview	A video meeting link is generated
7	HR	Uploads the interview recording	Audio is transcribed and evaluated; strengths, weaknesses and a recommendation are shown
8	HR	Decides to hire or reject	Status updated; offer letter PDF generated and emailed if hired

Application statuses

Status	Meaning
Pending	Application received, waiting for HR review
Under review	HR is reviewing the application
Shortlisted	Candidate selected for the next stage

Status	Meaning
Interview	Interview stage in progress
Hired	Candidate selected; offer stage
Rejected	Application closed without an offer

8. Functional Requirements

Priority uses the MoSCoW method: Must have, Should have, Could have.

ID	Requirement	Priority	Links to
FR-01	Users can register and log in with email and password. The system issues a secure access token on success.	Must	BR-07
FR-02	Each user has a role (HR or Candidate). HR features are unavailable to candidates and candidate features are unavailable to HR.	Must	BR-07
FR-03	HR can create, edit, close and delete job postings. Deleting a job also removes its assessments, results and applications.	Must	BR-03
FR-04	HR can generate the job description, requirements and responsibilities using AI from basic job details, and edit the result before publishing.	Should	BR-01
FR-05	Candidates can view open jobs and apply by uploading a PDF resume.	Must	BR-02
FR-06	On application, the system calculates an ATS score from skill match, keyword match and experience match.	Must	BR-02
FR-07	HR can view the applicants for a job ordered by ATS score, and a combined list of all applicants.	Must	BR-02
FR-08	HR can change an application's status through the defined pipeline, from a list or a Kanban board.	Must	BR-03
FR-09	Candidates can view their own applications and current status.	Must	BR-03, BR-06
FR-10	The system creates an in-app notification for relevant events, linked to the related job or application, and refreshes notifications automatically.	Should	BR-06
FR-11	The system emails the candidate when the application status changes. Sending must not delay the HR user's action.	Should	BR-06
FR-12	HR can create one multiple-choice assessment per job with a passing score.	Should	BR-04
FR-13	Candidates can take the assessment; the system scores it automatically and records pass or fail.	Should	BR-04
FR-14	HR can see a question-by-question breakdown of a candidate's answers against the correct answers.	Could	BR-04
FR-15	HR can generate a video meeting link for an interview.	Should	BR-05
FR-16	HR can upload interview audio. The system transcribes it and produces an AI evaluation: recommendation, strengths, weaknesses and score.	Should	BR-05
FR-17	HR can generate an offer letter as a PDF for a candidate and send it to them by email as an attachment.	Should	BR-08

9. User Stories

ID	User story	Acceptance criteria
US-01	As an HR recruiter, I want AI to draft a job posting so that I can publish vacancies faster.	Given basic job details, a draft with description, requirements and responsibilities appears and can be edited before saving.
US-02	As a candidate, I want to apply with my resume so that I can be considered for a job.	A PDF resume can be uploaded; the application appears in "My applications" with status Pending.
US-03	As an HR recruiter, I want applicants ranked by score so that I review the best matches first.	Applicants for a job are listed with the highest ATS score at the top.
US-04	As an HR recruiter, I want to move an application between stages so that the pipeline reflects reality.	Status changes are saved and shown immediately in both the list and the Kanban board.
US-05	As a candidate, I want to be told when my status changes so that I am not left waiting.	A notification appears and an email is sent for each change.
US-06	As an HR recruiter, I want to attach a test to a job so that I can check skills objectively.	One assessment with questions and a passing score can be saved for a job.
US-07	As a candidate, I want to take the test online so that I can show my skills.	The test is scored automatically and the result shows pass or fail.
US-08	As an HR recruiter, I want an interview transcript and evaluation so that my decision is backed by evidence.	After audio upload, a transcript and a structured evaluation are stored with the application.
US-09	As an HR recruiter, I want to send an offer letter so that the hire is confirmed quickly.	A PDF offer letter with the candidate and job details is generated and emailed.
US-10	As a system owner, I want candidates blocked from HR functions so that data stays protected.	A candidate account receives an access-denied response on any HR function.

10. Business Rules

ID	Rule
BRU-01	Only users with the HR role can create jobs, manage applications, create assessments, run interview evaluations and issue offer letters.
BRU-02	Only users with the Candidate role can apply for jobs and take assessments.
BRU-03	ATS score = 50% skill match + 30% keyword match + 20% experience match.
BRU-04	A job can have only one assessment. Saving again updates the existing assessment.
BRU-05	A candidate passes an assessment when their score reaches the passing score set by HR.
BRU-06	Deleting a job removes its assessments, assessment results and applications.
BRU-07	AI output (job content, interview evaluation) supports the recruiter. The final hiring decision is always made by a person.

11. Data Requirements

Data entity	What is stored
User	Name, email, password (stored securely), role (HR or Candidate)
Job	Title, description, requirements, responsibilities, open or closed status, owning recruiter
Application	Candidate, job, resume file, status, ATS score, AI interview score, interview recording and transcript
Assessment	Questions and answer options, correct answers, passing score (one per job)
Assessment result	Candidate answers, score, pass or fail
Notification	Message, recipient, related job or application, read state

12. Non-Functional Requirements

ID	Category	Requirement
NFR-01	Security	Passwords are stored hashed, never as plain text. Every protected function requires a valid access token.
NFR-02	Access control	Role checks are enforced by the server, not only hidden in the screen.
NFR-03	Privacy	Resumes and recordings are accessible only to authorised HR users and the owning candidate.
NFR-04	Explainability	The ATS score formula is documented so HR can understand why an applicant ranked as they did.
NFR-05	Performance	Emails are sent in the background so HR actions are not delayed. Notification refresh is automatic (every 30 seconds).
NFR-06	Reliability	If email settings are missing, the system logs a warning and continues instead of failing the action.
NFR-07	Usability	Screens are role-specific and usable on common desktop and mobile browsers.
NFR-08	Maintainability	The API is documented automatically so it can be tested and extended.

13. Assumptions, Constraints and Dependencies

Assumptions

- Candidates upload resumes as PDF files with selectable text.
- HR users have basic training on the platform.
- Users have internet access and a modern browser.

Constraints

- AI features depend on a third-party AI service on a rate-limited free tier.
- The ATS score is rule-based, so it depends on exact keywords being present.
- The system serves a single organisation.

Dependencies

- A third-party AI service for text generation and speech transcription
- A configured email account for sending messages
- A video meeting service for interview links

14. Risks and Mitigations

Risk	Impact	Mitigation
AI service limits or outage	Job generation and interview evaluation unavailable	HR can create jobs manually; interview review can continue without AI
AI produces inaccurate content	Poor postings or unfair evaluations	HR reviews and edits all AI output; final decision stays with a person (BRU-07)
Keyword scoring misses synonyms	Good candidates ranked low	Score is used to order the list, not to reject; HR can open any application
Personal data exposure	Privacy breach and loss of trust	Role-based access, hashed passwords, restricted file access
Email not configured or failing	Candidates not informed by email	In-app notification still created; failure is logged
Scope growth beyond release 1	Delay	Out-of-scope list agreed; new items go through change review

15. Success Criteria

Measure	Target
Applications that receive an ATS score	100%
Status changes that create a notification	100%
HR functions blocked for candidate accounts	100%
Time to create a job posting	To be baselined at pilot
Time from application to shortlist	To be baselined at pilot

16. Requirements Traceability

Business requirement	Functional requirements	User stories
BR-01	FR-03, FR-04	US-01
BR-02	FR-05, FR-06, FR-07	US-02, US-03
BR-03	FR-03, FR-08, FR-09	US-04
BR-04	FR-12, FR-13, FR-14	US-06, US-07
BR-05	FR-15, FR-16	US-08
BR-06	FR-10, FR-11	US-05
BR-07	FR-01, FR-02	US-10
BR-08	FR-17	US-09

17. Glossary

Term	Meaning
ATS	Applicant Tracking System: software that manages job applications
BRD	Business Requirements Document
HR	Human Resources
MCQ	Multiple-choice question
MoSCoW	Priority method: Must, Should, Could, Won't
RBAC	Role-based access control
LLM	Large language model, the AI used to write and evaluate text

18. Approval

Name	Role	Signature	Date
[Name]	Business analyst and project owner	[Signature]	[Date]
[Name]	Reviewer	[Signature]	[Date]
